CLASS

	PATENT NO.	CLASS	PATENT FAMILY CLASSIFICATION CODES
	TW 408089	ICM	C04B024-36
AB	The concrete comprises Type-I cement 1, cation-emulsified asphalt 0.9-1.1, F-Type <u>superplasticizer</u> 0.03, <u>Na CM-cellulose</u> 0.09-0.11, CaCl <sub>2</sub> 0.01, fine sand/stone 0.933, coarse sand/stone 1.4 weight parts, and stone powder (as filler). Preferably, the F-Type superplasticizer is naphthalene type water reducing agent; and the Na CM-cellulose is water-dispersible polyanion. The concrete is manufactured by mixing the F-Type superplasticizer with the cation-emulsified asphalt, stirring, adding Na CM-cellulose, adding CaCl <sub>2</sub> , adding surfactant, mixing, adding cement and stone powder, adding fine sand/stone, adding coarse sand/stone, and mixing. The concrete structure and construction machinery are also claimed.		
ST	semi rigid asphalt concrete manuf ambient temp; sodium CM cellulose sand stone asphalt concrete; cement superplasticizer calcium chloride asphalt concrete; water reducing agent asphalt concrete
